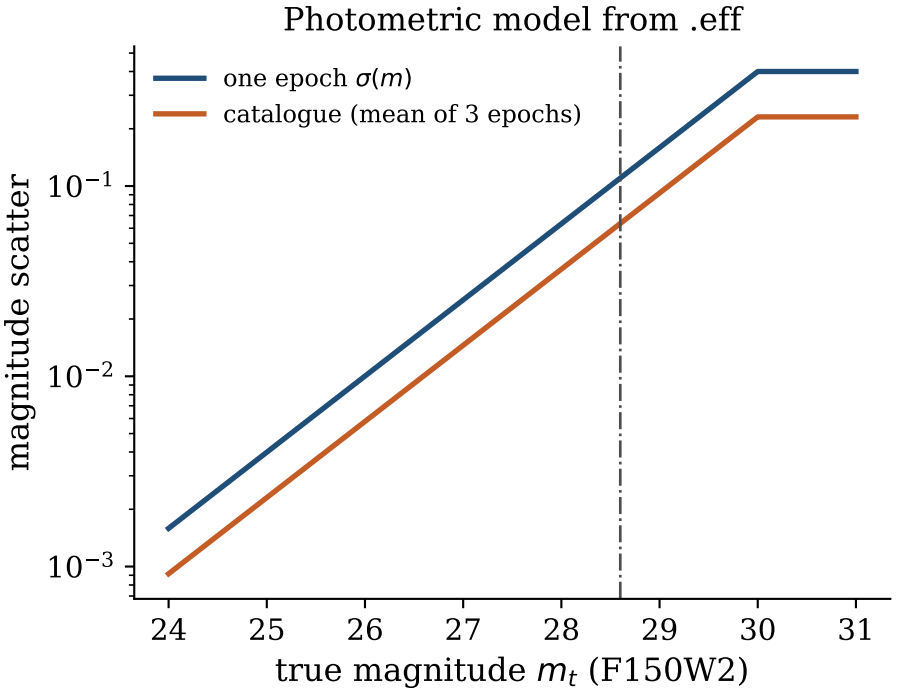
Sample A selection (.eff, three epochs)
detection probability
apparent magnitude m_{F150W2}
old: single-epoch tanh, not cubed
single epoch $p_{\rm det}(m)$ (erfc)
three epochs $S(m) = p_{\rm det}^3$
$\bar{S}(m_t)$ with photometric scatter
faintest cold detection (28.60)



Photometric model from .eff
magnitude scatter
true magnitude m_t (F150W2)
one epoch $\sigma(m)$
catalogue (mean of 3 epochs)
